## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Norman (US Patent 2,183,224) in view of Thoma (US Patent 4,796,818).

Norman teaches in the figures most of the elements of the claimed invention except for first guiding surface having a varying angle along its length and the second guiding surface having a varying angle along its length. Thoma teaches a chip slicer having a knife with a first guide surface having a varying angle (fig.6-7). It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the first guiding surface and second guiding surface of the knife of Norman varying at a angle along its length as taught by Thoma for the purpose of cutting the chip at a varying angle (col. 2, par. 3).
